TourTurf® APC removes debris, oily substances and pesticide residues.

TourTurf® APC All Purpose Tank Cleaner is designed to remove residues from turf care products, that can bind to the spray tank, filters and nozzles. Water alone may not remove these contaminants and therefore TourTurf® APC is recommended as part of the spraying procedure to avoid later turf damage and residues buildup in the spray tank, and it will help to reduce tank mixing issues.

After cleaning with TourTurf® APC 99% of all traces of common pesticides will be removed safely from the spraying equipment.

TourTurf® APC can be used as a dual use product for internal and external cleaning of the spraying system. The product is also safe to use on all types of external machinery parts. TourTurf® APC has been tested to confirm that no corrosion would be caused by the product and that it would be successful in removing dirt from machinery surfaces.

Regular cleaning of mower blades and equipment can reduce the spread of pathogens collected on the mower blades or associated machinery. This will help the reduce of the spread of the turf disease to additional amenity areas.

TourTurf® APC can be used as a safe and powerful product for maintenance of all turf care equipment.

Guaranteed content

A proprietary blend of tank cleaning agents, surfactants and sequestrant agents.

Application

As needed.

2L mixed in 400 L of water or 4L mixed in 800 L of water.

pH: 9.5
Density: 1.03

Can be used after application of TourTurf® GTP, among others, to remove any residue in the nozzles or to clean the tank.

Order number

8172
4 x 5 litres per carton
