TourTurf® Autumn

Oxide: 5-2-20 + 3 % Fe - Greens Grade

Potassium-rich mineral fertiliser for tees, greens, fairways and football pitches.

TourTurf® Autumn is a mineral NPK-fertiliser designed for autumn use. The fertiliser can be used on tees, greens, fairways and football pitches. Use whenever the plants need extra potassium, for example also in early summer to strengthen the water use efficiency of turf or during autumn to make cells stronger and harden turf for winter.

TourTurf® Autumn is enriched with magnesium, iron, calcium and sulphur, giving the turf grasses resilience and intense colour during the end of the season. The high potassium content helps to strengthen the turf for the cold and wet winter period.

The fertiliser has been developed and tested in close collaboration with leading golf courses and experts in England and Scotland to meet the highest standard in a mineral autumn fertiliser for sports turf.

The formulation is enriched with an organic material with humic acids which acts like a soil improver and enhances the fertiliser performance. This also stimulates plant growth and functions as a catalyst for the activity of microorganisms which increases the availability of nutrients.

The homogeneous granular spreads easily on the turf area and makes sure that all the nutrients cover the entire area.

Guaranteed content

Total nitrogen (N)	5.0%
- of which ammonium (N)	5.0%
Citrate-soluble phosphorus (P_2O_5)	2.0%
Water-soluble potassium (K_2O)	20.0%
Calcium (CaO)	6.0%
Magnesium (MgO)	3.0%
Iron (Fe)	3.0%
Sulphur (SO_3)	6.5%
Copper (Cu)	0.1%
Zinc (Zn)	0.1%
Manganese (Mn)	0.1%
Other elements:	
Humic acid	0.5%
Organic material	9.5%

Application

2 times a year.

250-350kg/ha.

Size 1-2mm.
SGN 100.

Order number

8770SK
50 x 20kg bags per industrial pallet
