# TourTurf® BSM Blue Spray Marker

**Blue indicator dye for tank mixes. Avoid overlap and identify faulty nozzles quickly.**

TourTurf® BSM Blue Spray Marker prevents the possibility of scorching and/or other damage to the plant which can occur if products are over-applied or double dosed through spray overlap.

TourTurf® BSM ensures accurate application of pesticides to avoid treatment of non-target areas, while also ensuring all required areas are covered without the need for costly and time-consuming additional sprays. Any clogging of sprayer nozzles can be quickly and easily identified through irregular spray patterns, which reduces the risk of spray drift. The product is completely non-toxic, non-corrosive and harmless to animals and the environment.

TourTurf® BSM is a highly concentrated formulation, which means it can be used at very low and economical application rates and can be applied all year round on fine turf, coarse turf and lawns.

TourTurf® BSM can be used with all types of spraying equipment, including booms, tow-behind and backpack sprayers.

The blue colouring of surfaces will last for approximately 24-48 hours depending on rainfall and/or irrigation levels. The product will also be quickly broken down by the ultra-violet rays in sunlight. TourTurf® BSM is added to the tank mix together with liquid fertilisers, pesticides and other liquid products.

## Guaranteed content

100% food grade liquid blue indicator dye.

pH: 7

Nozzles: Spray nozzles for small droplets.

## Application

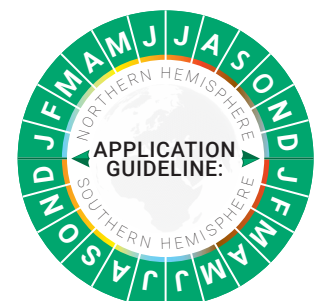

As needed.

0.4-1L mixed in 400 L of water or 0.8-2L in 800 L of water.

Synergy

## Order number
