TourTurf® ECO

Respond® Extreme Control

Wetting Agent

Photo: © Kenn Rømer-Bruun

Up to 25% water saving on fairways and training grounds.

TourTurf® ECO Respond® Extreme Control is a wetting agent designed to improve the water management and increase the quality of larger outfield areas like fairways, football training grounds and park landscapes.

The product is a 3 in 1 combination of spreaders, retainers and wetters formulated with both natural and more traditional wetting agent surfactants.

TourTurf® ECO contains 100% active wetting agent ingredients and is designed primarily for the higher cut of turf on areas like fairways. The usage of TourTurf® ECO helps in water conservation and will improve the use of irrigation water or natural rainfall.

It is advised to use the product preventatively for the best product performance, disease and water management. However, the product will give satisfactory control of dry spots and soil moisture levels even in stressed situations at the higher rate. During Dollar Spot season, the penetration of excess moisture into the soil profile is essential for healthy plants. A plant with access to water will be able to quickly regenerate and outgrow any disease damage.

We have made a formulation based on triple active ingredients providing even wetting and distribution of water in the soil profile, improved water infiltration and rewetting of dry soils.

Guaranteed content

Non-ionic surfactant which contains a mixture of co-block copolymers, alcohol ethoxylates and natural wetting agent (Camellia sinensis).

The product strengthens microbiological activity in the soil and is 100% biodegradable.

Proprietary blend of a 3-1 solution, which contains spreaders, penetrants and retaining agents.

Other elements:

Amino Acids (22 in total)	1.0%
Total organic matter	19.5%
Total carbon (C)	12.6%
Circular content.....	50.0%
CLC Cutin*	3.0%

pH: 5.1

Density: 1.21

Nozzles: Spray nozzles for larger droplets.

*The product contains TourTurf® CLC. For more information, please see the datasheet or locate the product in the catalogue.

Application

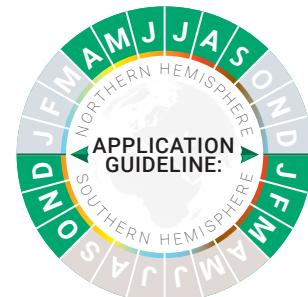

Use monthly or as needed. Use AFL to reduce foaming.

10-20L/ha mixed in 700 L of water.

Synergy with AFL, HPE, FWA & FS Micro Pack
