TourTurf® EXC

Respond® Extreme Curative

Wetting Agent

Neutralisation of Dry Patch and reduction of water repellency.

TourTurf® EXC Respond® Extreme Curative is a wetting agent which will help to solve water repellency problems caused by Dry Patch and Fairy Rings in sports turf. It works by breaking down hydrophobic coatings of sand and soil particles found in turfgrass root zones.

Respond® EXC Extreme Curative contains a specific blend of surfactants and organic acids designed to remove the cause of water-repellent soils, and to remove the waxy mycelium deposits from Fairy Rings and Dry Patch on the sand in the root zone. Water repellency is caused by the waxy lipids that coat sand and soil particles, making them hydrophobic.

The microorganisms responsible for making soils water-repellent are Basidiomycetes fungi.

To solve problems caused by Dry Patch and Fairy Rings, combine the application of TourTurf® EXC Respond® Extreme Curative with TourTurf® FTD and ETD to improve microbial activity as well as hollow coring aerification and soil replacement with TourTurf® ZSC Zeolite Soil Conditioner.

Respond® EXC Extreme Curative can be applied at any time of the year. For best results, use in early spring before starting with the yearly wetting agent programme. Apply again in autumn after the final wetting agent treatment.

Guaranteed content

Non-ionic surfactant containing a proprietary blend of ethoxylate and polyoxalkylene glycol soil surfactants and cleansing agent.

The product strengthens microbiological activity in the soil and is 100% biodegradable.

pH: 7

Density: 1

Nozzles: Spray nozzles for small droplets.

Application

When needed.

Curative treatment: 20L/ha mixed in 800 L of water.

Synergy with OXT, FTD, ETD & ZSC

Order number

8570
2 x 10 litres per carton
