Essential micronutrients for nitrogen-free turf hardening in autumn.

TourTurf® FS Autumn Zero is a mineral liquid micronutrient fertiliser for turf on golf courses and sports fields. TourTurf® FS Autumn Zero ensures optimal supply of micronutrients for autumn and helps the plants to harden for winter.

The TourTurf® FS Range includes fertilisers that provide balanced growth, produce vital grasses and pH control of the tank-mix. The use of these products ensures optimal supply and absorption of macronutrients, micronutrients and trace elements. An economical solution for optimal use of nutrients, without any leaching losses or negative environmental impact.

The fertiliser can be used throughout the growing season. You can optionally add biostimulants such as seaweed, humic acid and amino acid products. Always check mixability first. A jar test will help you to ensure the compatibility of different products.

The combination of TourTurf® FS Autumn Zero with TourTurf® FS Micro Pack ensures optimal pH control and the absorption of all nutrients regardless of the growth situation. The fertiliser promotes general plant health and strengthens the turf. The product can be applied with any type of sprayer. The fertiliser must be mixed with water in a minimum ratio of 1:4. We recommend using spray nozzles for larger droplets.

Guaranteed content

Sulphur (SO ₃).....	1.20%
Iron (Fe)	1.50%
Manganese (Mn).....	0.70%
Copper (Cu)	0.30%

pH: 3.1

Density: 1.1

Nozzles: Spray nozzles for larger droplets.

Application

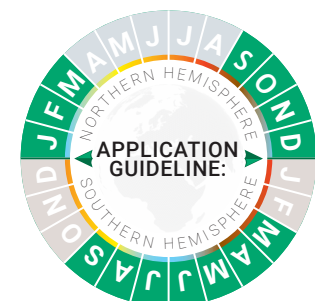

Use monthly during winter season.

50-100L/ha mixed in 200-600 L water.

Synergy with PHB
