USE

Optimal supply and absorption of macronutrients.

TourTurf® FS Balanced Liquid 10-2-11 is a mineral liquid NPK-fertiliser for turf on golf courses and sports fields. It is used to feed essential nutrients in small amounts throughout the season, ensuring steady, healthy growth.

The TourTurf® FS Range includes fertilisers that provide balanced growth, produce vital grasses and pH control of the tank-mix. The use of these products ensures optimal supply and absorption of macronutrients, micronutrients and trace elements. An economical solution for optimal use of nutrients, without any leaching losses or negative environmental impact.

The fertiliser can be used throughout the growing season. You can optionally add additives such as seaweed, humic acid and amino acid products. Always check mixability first. A jar test will help you to ensure the compatibility of different products.

The combination of TourTurf® FS Balanced with TourTurf® FS Liquid Micro Pack ensures optimal pH control and the absorption of all nutrients regardless of the growth situation. The product can be applied with any type of sprayer. The fertiliser must be mixed with water in a minimum ratio of 1:4. We recommend using spray nozzles for larger droplets.

Guaranteed content

Total nitrogen (N).....	10.00%
- of which urea (N).....	10.00%
Phosphorus (P ₂ O ₅).....	2.30%
Water-soluble potassium (K ₂ O).....	10.70%

pH: 2

Density: 1.2

Nozzles: Spray nozzles for larger droplets.

Application

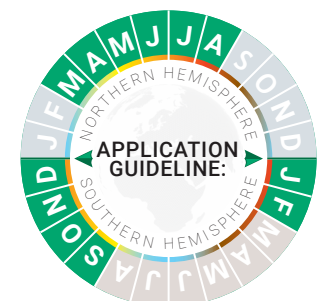

Use monthly during growing season.

50-100L/ha mixed in 200-600 L water.

Synergy with PHB
