# TourTurf® GTP Green Turf Paint

Permanent turf paint and documented UV-protection

## Concentrated colour for damaged, dormant or turf under heat and UV-stressed turf.

TourTurf® GTP Green Turf Paint has been developed specifically for use on turfgrass and is designed to restore a natural green colour to discoloured or damaged turf. TourTurf® GTP is particularly effective in hot and dry conditions, when plants are often subject to drought stress, heat stress and high light intensities.

Turf appearance will be enhanced immediately after application, and for improving presentation before special events. This products colouring effect also means it can be used as an effective spray pattern indicator when tank mixed with compatible products, such as TourTurf® FDC and TourTurf® HPK (Only available outside of EU).

The pigment technology used in TourTurf® GTP effectively mimics the plants natural defence mechanisms, providing lasting protection against radiation and UV damage. This means that turf can maintain a healthy appearance during periods where colour would be negatively affected by stress.

In summer, TourTurf® GTP will help to protect plants from light intensity and UV related damage, maintaining a natural green colour in stressful conditions.

In Autumn, turf aesthetics can be maintained while the turf is not actively growing. Any damage from disease scarring can also be effectively masked.

### Guaranteed content

Acrylic Polymer, Green Pigment and UV Absorbers.

pH: 5  
Density: 1.39  
Nozzles: Spray nozzles for small droplets.

Use TourTurf® APC to clean tank/nozzles immediately after use.

### Application

As needed.

**Lighter colour:** 0.75-1L/ha mixed in 300 L of water.  
**Darker colour:** 1.0-1.5L/ha mixed in 300 L of water.  
**Divot mix:** 250ml in 750ml of water for 50 kg sand.  
**Heat / UV Stress:** 1.5 L mixed in 300 L of water.

Synergy with FDC, IDC, HPK & EDC
