TourTurf® LLG Respond® Extreme Long Lasting Granules Wetting Agent

Micro granules

SAVE
25%
WATER

Dry Patch control and enhanced drought stress recovery.

TourTurf® LLG Respond® Extreme Long Lasting Granules can be used in numerous ways, firstly as a blanket treatment by spreading the granules over the entire playing surface, such as tees, golf greens or sports pitches.

Secondly, TourTurf® Respond® Extreme Long Lasting Granules can be used for the specific spot treatment of Dry Patch, for areas which are difficult to reach with a sprayer such as bunker surrounds, difficult to reach greens and tee boxes.

TourTurf® LLG Respond® Extreme Long Lasting Granules contains all the added benefits of TourTurf® Respond® Extreme Long Lasting wetting agents this includes: A specific blend of wetting agent technologies, these include spreading and penetrating agents to allow water to evenly spread and treat the most hydrophobic rootzones.

This is combined with an innovative residual wetting agent for correct water management within the rootzone enabling a longer period of water conservation and stress reduction on the turfgrass.

Ideal for spot treatment of problem patches and hydrophobic root zones, it improves the water-holding capacity of all types of rootzones. With a low and economical application rate, it delivers long-term results when used in conjunction with the TourTurf® Respond® ELL Extreme Long Lasting wetting agent programme.

Guaranteed content

Wetting Agent..... 12.5%
Non-ionic surfactant which is a proprietary blend of ethoyle and polyoxalkylene glycol surfactants, wetting agents and spreaders.

Carrier material is dust free and 100% biodegradable.

Application of 200kg/ha LLG equals to 25 litres of TourTurf® ELL.

Application

Preventive: Every 6 week.
Curative: Every 4-6 week.

Preventive: 100-200kg/ha.
Curative: 200-300kg/ha.

**Size 1-2mm
SGN 75.**
