WATER

Dry Patch control and enhanced drought stress recovery for hand watering and syringing.

TourTurf® LLT Respond® Extreme Long Lasting Tablet with seaweed is based on the same formulation as our liquid TourTurf® Respond® Extreme Long Lasting, to guarantee a satisfying outcome.

The product can be used for the specific spot treatment of Dry Patch and through periods of drought. This provides preventive measures and enhances the recovery of damaged and stressed turf.

The tablets can be used with hand irrigation practices to ensure water is penetrated into the rootzone more efficiently for good water conservation practices or applied into the irrigation system, at suction probe or bottom of tank.

Provides a uniform treatment that covers 100% of the rootzone and soil particles. The tablets is designed to improve the water holding capacity of all types of rootzones.

TourTurf® LLT improves hand watering and provides superior control of dry patch, enhancing the recovery of drought-stressed turf. Ideal for spot treatment of hydrophobic root zones, it is specially formulated for high-pressure water systems and helps reduce summer stress and wilt.

Guaranteed content

Non-ionic surfactant based on a wetting agent with seaweed based on Polyethylene Glycol surfactants formulated for use through hose end pellet applicators.

The product strengthens microbiological activity in the soil and is 100% biodegradable.

Seaweed 2.5%

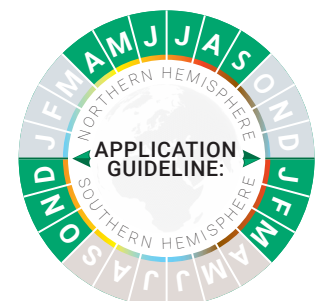

Application

When needed.

Per Tablet:
Spot treatment: 3000 m² at 5-10 minutes.
Blanket treatment: 1500 m² at 10-20 minutes.
