TourTurf® TFC High K Turf Food Concentrate + LPT

Oxide: 4-4-10

Liquid fertiliser with plant sugars and chelated micronutrients.

TourTurf® TFC High K 4-4-10 Turf Food Concentrate + LPT Leaf Penetrant Technology is a mineral foliar NPK-fertiliser for turf designed for quick leaf uptake of nutrients under challenging environmental conditions. From both low soil temperatures to higher air temperatures and humidity.

TourTurf® TFC High K contains an updated LPT package based on humectants and organic facilitators. The technology ensures that all nutrients stays on the leaf surface and allows a stable and constant release of nutrients into the leaves even at a high temperatures.

Chelated micronutrients ensure that the nutrients are available for the plant.

TourTurf® TFC High K contains EDTA chelated micronutrients in the correct ion form to allow uptake for the turf plant.

The micronutrients are designed to compensate for micronutrient deficiency in the plant and help with the physiological process. Plant sugar stimulates natural microbial soil life.

Guaranteed content

Total nitrogen (N)	4.0%
- of which Urea	4.0%
Phosphorous Pentoxide (P_2O_5)	4.0%
Potassium Oxide (K_2O)	10.0%
Iron (Fe)*	0.1%
Boron (B)	0.06%
Copper (Cu)*	0.1%
Manganese (Mn)*	0.1%
Zinc (Zn)	0.1%
Molybdenum (Mo)*	0.1%
Other elements:	
Carbohydrates	3.5%
LPT*	2.0%

pH: 8.5

Density: 1.22

Nozzles: Spray nozzles for small droplets.

* EDTA chelated

*The product contains TourTurf® LPT. For more information, please see the datasheet or locate the product in the catalogue.

Application

Use when needed.

40-60L/ha mixed in 300-600 L water.

Synergy with PHB, MBP & other TFC products

Order number

8050
2 x 10 litres per carton
